Course Description

Among the many fields of modern logic research, modal logic has been deeply applied in many fields from humanities to software design because of its good balance between expressiveness and complexity. In this course, the concepts and methods of modal logic will be introduced with its application in modeling time, knowledge, necessity, and social behavior. In this way, students will be brought into an environment similar to actual research and experience the interaction between different concepts and needs in theory and practice. This course will guide students to become familiar with classic textbooks, manuals, and important articles, and enable students to explore and learn deeper content on their own when they have further interest.
