**Course Description**

This course considers how scientists, journalists, and film makers communicate about climate change; what measures are used by activists, social media users, and "green influencers" to convey urgency and persuade others to engage; and how the challenges and solutions of the climate crisis can be visualized using stories, short videos, memes, news, infographics, and other media. It introduces people whose job it is to communicate about climate change and discuss issues such as trust, greenwashing, attention, engagement, mobilization, urgency, and apathy. The course is built on active participation: students collect and analyze a variety of climate change communication and team up with others to create a media product as part of their exam.

**Language(s) of Instruction**
English
