HEALTH/SOCIETY/SOC

**UCEAP Quarter Units**

6.00

**UCEAP Semester Units**

4.00

## Course Description

This course explores social, cultural, economic, and structural factors influencing individual and population health risks and outcomes beyond predisposed biological factors and access to healthcare. It adopts a multidisciplinary approach to critically examine the complex emerging public health problems, their causes, and potential solutions. Students engage in contemporary technological, ethical, political, and cultural debates in health, healing, and well-being. Through the analysis of these factors and the development of strategies to address them, students gain the knowledge to promote health, and develop critical insights into health equity and strategies to address social factors for improved health for all, for a just society.
