### **Course Description**

This course gives students the skills to work with biological datasets to present, summarize, and explore patterns in a wide range of datasets using python, pandas, and seaborn. For each course topic, student apply the concepts they have learned to complex research datasets. Student groups choose a dataset to work with at the start of the course. The course is taught in workshops, with short lectures introducing the topic, and group practice with examples and complex datasets using Jupyter notebooks.
