UCEAP Transcript Title CORP FIN & BEHVR
UCEAP Quarter Units 6.00
UCEAP Semester Units 4.00

Course Description

This course focuses on the fundamental financial theories and applications that explain how investors, managers, corporations and other market participants interact and behave in the financial markets and what affects and drives their decisions, as well as the implication of those decisions and interactions. It also considers how corporate financial managers make financing decisions and manage financial risks. The course covers several major aspects of financial analysis and decision making that are important to modern corporations, including the valuation of projects and securities, capital structure choice, working capital management, and the management of international risks. While many of the theories and tools in financial management assume well-functioning capital markets with rational economic agents, the course also covers alternative perspectives based on key insights from the field of Behavioral Finance.
