4.00

Course Description

This course requires basic programming skills, which includes an understanding of what variables are; the basic structure of loops; Python indexing, and slicing of iterables. It expands on programming skills from a digital humanities perspective. The course focuses on Python pandas for data analysis and data manipulation and uses matplotlib for visualization. The course also instructs on version control using git. The latter half of the course focuses on social media analysis including network analysis, topic modeling, and sentiment analysis.

It is strongly recommended that students have taken the intermediate course “Python Programming for Digital Humanities” or a similar one before taking this course.
