Course Description

The course highlights the ways in which economic and financial processes both shape, and are shaped by, space. In particular, the course focuses on understanding of how uneven development occurs, alongside exploring questions of how social inequalities arise and what causes economic and financial crises. In addition to this, the impacts of economic and financial processes on the environment and the climate crisis are considered. In doing so, the course engages with fundamental challenges facing contemporary societies and explores policy options to address them. Students gain a solid grounding in a number of theoretical approaches, concepts and debates pertaining to the economy, finance and space; explore economic and financial processes in the real world through case studies from a range of different contexts, including those in the Western capitalist core and (semi-)peripheries of post-socialist Eastern Europe; and debate policy options for the future.
