Course Description

In today's world, challenges are incredibly complex, multifaceted, and often intersectoral. Given the complexities and interdependencies of the 21st century, scientific disciplines and their siloed knowledge production practices are no longer sufficient to fully grasp global problems and find solutions to them. Yet they remain the dominant knowledge structures through which the world is analyzed and explained. This course first explains the structuring and evolution of scientific disciplines. Then it addresses the notion of interdisciplinarity and the tools it offers for a more holistic understanding of international relations.
