Course Description

This course explores key concepts and debates in environmental and technology ethics: the commitments and values operative in models of sustainable development (theories of justice, capability, and agency); questions of human populations (demographics, food production, and food security); sustainable transport; values at work in approaches to biodiversity conservation (wild, agricultural, urban); and conflicts and convergences in aiming for smart and sustainable cities. Students focus on the instrumental versus intrinsic value; demographics and consumption; food security and related aspects of animal agriculture; justice and sustainable development; environmental citizenship; and the future of work. The course examines key ethics responses rooted in hermeneutics, in philosophical, and religious traditions (Christianity, Islam, Buddhism, and Daoism) and characterizes the role of the ethicist in "expert" cultures and in policy development in Ireland, the EU, and internationally.
