4.00

## Course Description

This course examines international trade, theory and policy. It will aim to explain patterns of world production and trade and ask if international trade is beneficial. This will be done with the help of models from international trade theory that are important components of the toolkit of contemporary trade economists. It will also explore the phenomena of outsourcing and international mobility of labor (immigration) and capital (Foreign Direct Investment (FDI)). The course will analyze and compare instruments of trade policy and evaluate their impact on domestic and international welfare. Finally, the course will study the world trading system, including the World Trade Organization (WTO) and international trade agreements.
