**UCEAP Transcript Title**

WILDLIFE FERTILITY

**UCEAP Quarter Units**

5.00

## **UCEAP Semester Units**

3.30

### **Course Description**

This course provides a general overview of practical applications of fertility control for ethical management of wildlife and other free-living animals. Lectures and practical sessions focus on case studies to illustrate the many aspects of wildlife fertility control applications. Students learn about products available, methods to deliver contraceptives and evaluate their impact on reproduction and welfare of individuals and populations of free-living animals. Through a mixture of lectures, informal discussion groups, laboratory and field practical sessions, students learn about the challenges and opportunities offered by fertility control and complete a proposal for a project on wildlife fertility control. The course addresses the rising demand for innovative conservation approaches and prepares students to balance ecological and economic needs with animal welfare.
