S

**UCEAP Official Title**

SCIENTIFIC WRITING IN CONTEXT (LEVEL 2)

**UCEAP Transcript Title**

SCIENTIFIC WRITING

**UCEAP Quarter Units**

6.00

**UCEAP Semester Units**

4.00

### **Course Description**

The ability to communicate scientific information well is important if one is to disseminate scientific ideas clearly and accurately. Scientific communication involves more than just writing. It also involves the ability to read, analyze, understand, and critique scientific subject matter in a knowing way, at an appropriate depth and breadth, and with an appropriate style for an intended audience. Within this broad context, this course guides students through writing a scientific research paper, as applied to the physical sciences, for an audience of their peers. Students write about one real physical phenomenon such as one of Hooke's law, Torricelli's law, projectile motion, the behavior of a pendulum, or some other suitable phenomenon. Such investigation is supported by simulations and/or practical experiments.

### **Language(s) of Instruction**

English
