5.50

#### **UCEAP Semester Units**

### **Course Description**

This course consists of practical project work or audit and an evaluation field stay including technologies and background information necessary to develop sustainable community-based projects, e.g. PV training, CO2compensation, household biogas plants, clean cooking, biogas, income generation. International student hybrid working groups develop CO2 compensation projects for climate and SDGs tackling the needs of the local partner communities together with the partner NGOs. The course offers research and innovation opportunities to deepen the development and application of sustainable technologies and methodologies. It also includes cooperation with local community organizations, NGOs, international universities, and other partners.
