## **Course Description**

This course is part of the Laurea Magistrale degree program and is intended for advanced level students. Enrollment is by permission of the instructor. At the end of the course the student has a wide knowledge of the most important statistical techniques employed for forecasting and prediction purposes in modern business activities. In particular the student is able to: select the most appropriate predictive model to solve the business problem at hand; analyze the data and perform predictions using the statistical software R; report the results in a proper format for the business management. The course content includes: a probabilistic approach to the business prediction and forecasting problem, evaluation of predictions and forecasts, linear predictors, and forecasting models.
