Course Description

The course introduces students to the fundamental principles of management accounting, financial management, and financial institutions. Students learn how accounting information can be used by managers to make crucial decisions, such as pricing of products or services, discontinuing or offering new products, and expanding the product/service range or investing in new product development. Students are introduced to various topics in management accounting and financial management, including cost behavior, cost-volume-profit analysis, costing systems, budgeting, variance analysis, performance measurement, and capital budgeting. As the course progresses, students are introduced to some key concepts in financial management, such as the role of financial markets and financial institutions, capital structure, and risk. The course provides students with a solid foundation in management accounting and financial management, allowing them to apply their knowledge in real-world situations.
