Course Description

This entry-level course covers statistical analysis related to survey methodologies and statistical analysis tools such as R, Stata, and Python for data analysis as a general topic of international studies.

Students learn various data analysis methodologies in the fields of international economy, international development cooperation, and international relations, and how to generate, interpret, and critically judge quantitative analysis results on major topics covered in those fields.

This course is ideal for undergraduate students in international studies who want to apply econometric principles to real world data. It is particularly suited for those seeking to develop skills in R programming, including data cleaning, visualization, statistical modeling, and interpretation, to support independent research and future academic or professional endeavors.
