Course Description

In this online course, learn how to construct graphs and visualizations according to the theory *Grammar of Graphics*. Learn how to create visualizations yourself using the software *R* and its package *ggplot2*. A central part of creating visualizations is making choices. Through the choices you make, your visualizations are more or less intelligible and also highlight different aspects of the data. An important element of the course is therefore to review visualizations by other course participants. Topics covered in the course include introduction to *R* and *ggplot2*; *c*hoice of color, symbols, scales, and perspective (2D, 3D); summation and abstraction; interactive visualizations; maps and spatial data; visualization of statistical models.
