Course Description

This course has two main goals. The first goal is to introduce major trends in contemporary housing and the second is to envision future living spaces. The living spaces in this course include residential, recreational, commercial, working, educational, and healthcare spaces. Students attain a global perspective in contemporary living spaces; explore current living space trends and case studies; and examine major keywords for future living spaces. The final project consists of a short research study in which students envision future living spaces for various demographics, including but not limited to the elderly, young generation, dual-income families, office workers, K-12 students, patients and healthcare providers, and people with disabilities.

No prerequisite required, but it is recommended to take undergraduate "Creating and Understanding Spaces (HID 1101)" for any introductory interior design courses.
