PEOPLE/ANIMALS/ENVR

**UCEAP Quarter Units**

6.00

**UCEAP Semester Units**

4.00

## Course Description

In this course, students learn to apply the One Health approach to address public health issues with a focus on infectious diseases. Students examine how the concept of One Health recognizes that the health of people is intertwined with the health of animals and their shared environment. Understanding this concept allows the integration of information from these three health domains when creating programs, policies, and legislation to achieve better public health outcomes. Current major public health concerns will be analyzed, and One Health interventions contrasted to a traditional approach for students to better appreciate the differences.
