UCEAP Semester Units

3.00

Course Description

This course focuses on creation of films that allow experimentation in various stages of filmmaking processes, including the development of various alternate forms of (non) narrative story structures. Students are exposed to a range of conceptual and production strategies in experimental film using key historical and contemporary examples and then put those ideas into practice through exercises and projects to develop their own experimental film practice. Experience and knowledge gained in this module provide a basis for more developed experimental film production, as well as complementing research into this field. By the end of the course, students can conceptualize, film, edit, and present their own short experimental films.

Language(s) of Instruction

English
