UCEAP Course Suffix**UCEAP Official Title**

CONSERVATION BIOLOGY

UCEAP Transcript Title

CONSERVATION BIOL

UCEAP Quarter Units

4.50

UCEAP Semester Units

3.00

Course Description

This course critically explores principal drivers behind the erosion of natural capital and resilience of ecosystems in light of them. Students take a solutions-based approach for how best to deal with habitat transformation, biodiversity loss, climate change, overexploitation of natural resources and contamination. Solutions incorporate a biological understanding of local and global impacts, drawing from the physical and life sciences, and extend it to actual and potential political, economic, and socio-cultural instruments appropriate and effective to address threats and changes to global biodiversity and ecosystem health.

Language(s) of Instruction

English
