UCEAP Semester Units

3.00

Course Description

This course explores the diverse life forms and ecosystems of the world's oceans and coastal regions. It covers the biology, behavior, and ecological roles of marine organisms, from microscopic plankton to large marine mammals. Key topics include marine biodiversity, oceanography, and the complex interactions that sustain marine ecosystems. The course also addresses the impact of human activities, such as pollution and overfishing, on marine life, as well as current issues in marine conservation and the sustainable management of marine resources. Students gain a comprehensive understanding of the importance of preserving ocean health and the challenges facing marine environments today.
