FUNGAL BIOLOGY

**UCEAP Quarter Units**

8.00

**UCEAP Semester Units**

5.30

## Course Description

This course introduces the biology of fungi, which play important roles in most ecosystems, as decomposers, parasites or symbionts. It covers the immense diversity in the fungal kingdom, their ecology and nutritional modes, as well as their life cycles and genetics. As fungi play important roles in society and in circular economy, the course also considers applied aspects of fungi. The course has a practical component where students work experimentally with fungi in the lab and learn to recognize characteristic species in their natural habitat during a one-week field course.

## Language(s) of Instruction

English

## Host Institution Course Number

BIOS3250

## Host Institution Course Title

FUNGAL BIOLOGY
