## **UCEAP Transcript Title**

**NEUROPSY & NEUROSCI** 

## **UCEAP Quarter Units**

6.00

#### **UCEAP Semester Units**

4.00

### **Course Description**

This course examines how cognitive and behavioral neuroscience can be applied in clinical settings. It examines the ways in which neurological illness can affect functions such as attention, memory, speech, decision making and emotion regulation. It covers the principles underlying neuropsychological assessment, and the problems that are typically observed following specific illnesses such as stroke, traumatic brain injury and dementia. It also explores how neuroscience can provide insights into problems that present in the psychology clinic, such as depression, anxiety, addiction and schizophrenia.
