Course Description

This course examines the role of human psychology, human thought and behavior, in the climate and biodiversity crises. It explores how we got where we are, what it is about human thought and behavior and the structures and systems created that produced these crises and inactions. The course covers how the Climate Crisis is affecting human health, behavior, and well-being as well as the ways these effects are unevenly distributed across the world and the implications of this inequity. Finally, this course covers what psychology has to offer in terms of solutions and how to leverage our understanding of human thought and behavior to enact climate justice.
