Course Description

Persistent gender and other inequalities in education, employment, income and other resources, including technology use, continue to deter adults and children from attaining their full potential in many parts of the world.

Although there is some progress in addressing inequalities across the world, rapidly increasing access to digital devices and platforms in many parts of the world poses new challenges. This course addresses three interrelated questions about the drivers of digital inequality, how they are patterned across gender, racial, and ethnic identities as well as how they intersect with other forms of social inequalities. A strong emphasis is also placed on novel strategies for tracking and confronting these inequalities to attain a more just and equitable society for all.
