Course Description

This advanced course is especially designed in the format of seminars and guest lecturers to expose the student to the frontier of knowledge of climate and apprehend what are the topics available for the final thesis. Students are able to grasp what are the emerging areas on climate science and be able to select the topic for future deepening of the knowledge.

The course is structured with 1- or 2-hours long time slots and with three types of offers:

- 1) Seminars: ≥ 1 hour on current research/technological challenges, delivered by specialist.
- 2) Lecture: ≥ 2 hours on a more general topic of broader relevance and less technical details.
- 3) Short course: ≥ 3 hours on an additional supplementary skill. Examples may include a focus on programming or on an area of transversal interest.

The exact schedule changes every year. Students are asked to check the program frequently given that it is usually updated in the course of the year based on availability of speakers.
