UCEAP Course Number 107
UCEAP Course Suffix
UCEAP Official Title CITIES AND ENERGY
UCEAP Transcript Title CITIES & ENERGY
UCEAP Quarter Units 4.50
UCEAP Semester Units 3.00

Course Description

This course studies the relationship between energy and urbanization, taking a global approach that gives pride of place to cities in the Global South and emphasizing a socio-material perspective and an understanding of the social practices and hierarchies that structure cities. Furthermore, energy governance is a major issue in urban policy today, particularly in the context of ecological transition. Therefore, it studies urban energy, taking into account the long term and also looking ahead to the future. In terms of methodology, the course is rooted in geography. It uses and familiarize students with certain geographical methods such as cartography and graphic visualization. It also encourages students to engage directly and critically with social science works in the form of articles and books, leading to presentations and lectures, as well as a graded written assignment.
