4.00

Course Description

The course teaches the economics of transition and resilience. The focus is on understanding the relevant phenomena and discussing the importance of resilience at the individual, firm (micro), and economy wide (macro) level as well as understand why rationally bounded agents and competitive markets cause resilience to be less than efficient. The course results in students designing feasible policies and institutional reforms that can promote resilience at one of the levels identified above. In this course, work on a challenge, provided by the European Commission's DG ECFIN, unit Economics of Transition and Resilience. This current and real-world policy challenge is our guide throughout the course. Students prepare a policy brief for the Commission and present it in Brussels. The course combines an existing group project with an individual learning journey, where you get a chance to apply what you have learned creatively and present the results professionally.
