Course Description

This course covers the fundamentals of technological innovation management and strategy. Students explore how firms and nations develop, implement, and manage technological innovation to create competitive advantages in the global market.

The course focuses on key aspects of firms' innovation strategy and management, including sources and types of innovation, firms' decisions regarding market entry with new technologies, evaluation and selection of R&D projects, standards competition, and intellectual property strategies (including patenting strategy). Additionally, students develop analytical skills to work with archival data commonly used in quantitative technology management research, including metadata from research papers and patents.
