6.00

UCEAP Semester Units

4.00

Course Description

The course builds upon ECO1011S and provides the analytical tools and formal models to explain the behavior of output, inflation, employment, interest rates, and other economic aggregates. These tools are used to understand current economic issues, forecast the behavior of the economy, and assess the impact of policy choices. The course allows students to understand the behavior of households, firms, governments and Central Banks. It starts with analyzing the short run behavior of the economy and then moves on to explore the open economy and exchange rates. Finally, it looks at the long run and assesses the role of technology and population growth on aggregate economic growth using the Solow growth model. Course entry requirements: ECO1010, ECO1011 and MAM1010 (or an equivalent) or MAM1031F or MAM1032S.
