Course Description

Often called "the language of business," a basic knowledge of accounting is essential to becoming a successful business manager. This course teaches basic accounting concepts to read and analyze corporate financial statements. The first part of the course focuses on the core financial statements: Balance Sheet, Income Statement, and Cash Flow Statement. It also covers some important accounting topics such as the globalization of accounting standards and the double-entry accounting process (journal entries, posting, preparing trial balances, adjustments, and closing entries). The second part of the course covers various methods to read and analyze corporate financial statements, such as various financial statement analysis techniques used in both short and long-term analysis. Real examples (actual corporate financial numbers) are used for comparing and analyzing corporate financial performance.
