AI GOVERNANCE

UCEAP Quarter Units
4.50

UCEAP Semester Units
3.00

Course Description

This course explores the complex regulatory environment of AI systems, which ranges from regulations and governance instruments to ethical principles and industry standards. It starts with an introductory session explaining what AI technologies are, zooms in on their benefits and the novel risks they give rise to, and investigates the role different legal modules can play in regulating them. At the end of the semester, it explores the question of whether the race for AI will thwart regulatory efforts, and to what extent ethical principles can serve as a complement to legal and industry norms.
