UCEAP Transcript Title AI IN ECONOMICS
UCEAP Quarter Units 4.50
UCEAP Semester Units 3.00

Course Description

This is a cross-course between artificial intelligence (AI) methods and economics. The course will demonstrate to students how artificial intelligence methods can aid economists in obtaining and analyzing various large datasets through numerous economic research examples. With the help of AI technology, people can gain a deeper understanding of the operating laws of complex economic systems, explore potential solutions to real-world economic problems, and predict future economic trends. This course will also utilize economic knowledge to analyze the market competition patterns and development trends of the artificial intelligence industry in China.
