Course Description

One of the big challenges in psychology is to understand how elements of the nervous system, such as neurons, can cooperate to produce high-level operations like perceiving, thinking, acting and consciousness. This course introduces students to biological psychology by way of studying the link between the brain and behavior. Students gain an understanding of how the brain is involved in everything we do; whether it be recognizing faces, getting a good night's sleep or remembering where you left the car keys. The course consists of: Historical Perspectives and The Big Questions; Measuring Brain and Behavior; The Developing Brain; Movement & Action; Sensation and Perception; Executive Functions; Sleep & Dreaming.
