Course Description

This course provides the tools to develop an analysis when confronted with information related to indicators of spatial disparities and development, such as GDP, HDI, economic growth rates, and others. The course places emphasis on concepts, issues, and challenges—of a social and political nature—associated with understanding how indicators are produced, their roles, their limitations, and their embeddedness within political contexts and ideologies. The course encourage students to formulate well-reasoned arguments supported by knowledge (literature and examples) and by skills (analysis, reformulation, argumentation) on the theme of spatial disparities and development indicators. It equips students to develop their own critical analysis when faced with information concerning spatial organization, spatial inequalities, and development indicators.
