Course Description

This course covers theoretical and empirical basics of labor economics, following a globally standard textbook. It explores mechanisms and labor market impacts of various socioeconomic drivers including immigration, labor force participation, college enrollment, racial/gender discrimination, incentive pay system and labor unions. Grounded on theoretical frameworks, it also discusses controversial policy issues such as minimum wage, safety regulations, and various taxes/subsidies, while providing guidance on causal inference and its popular methods. Studying labor economics serves as a great gateway to micro fields (education, health, environment, development, urban economics, etc.)

Course Prerequisites: Introductory microeconomics is necessary. Familiarity with causal inference or taking a course in econometrics is an advantage. Programming is not required.
