3.30

### **Course Description**

This pioneering course combines academic instruction with industry collaboration, featuring training delivered by a professional Alibaba Cloud instructor and preparation for an industry-recognized cloud computing certification. The course introduces the use of information technology with an emphasis on entrepreneurship, covering fundamental cloud computing concepts and their application in entrepreneurial and intrapreneurial contexts. Topics include key business processes, challenges, risks, and rewards, with a focus on developing digital business projects grounded in real-world technology industry examples and suitable for presentation to stakeholders, including potential investors.
