Course Description

This course interrogates the significance of climate change for International Relations as a discipline and for international relations as a set of global political practices. The course explores the relationship between natural science and international relations, and what this means for making sense of the international politics of the environment. It examines the implications of climate change through several lenses including international theory, international institutions and governance, conflict, negotiations and communications, social movements and protest, inequality and justice, and discourses of crisis. The course seeks to facilitate student independence in exploring the international relations of climate change, as well as transferable writing skills, through the creation of a blog post on one of the security implications of climate change and developing an essay on any single climatic process and its implications for international relations.
