Course Description

Students are shown how to use Electroencephalography (EEG) equipment to record and analyze data from the brain in real experimental situations. Students also investigate the manipulation of brain responses through Transcranial Magnetic Stimulation (TMS) and analyze data from functional magnetic resonance imaging. All teaching takes place in the form of practical sessions, allowing students to learn these approaches through real-life experience. This course is ideal for students seeking to take their first steps into psychological research using state of the art technology.
