Course Description

This course builds on introductory macroeconomics and analyzes the main economic problems at the aggregate level of an economy in the long term (economic growth) and in the short term (economic fluctuations) using simple models. Topics include the main determinants of income levels and the analysis of international discrepancies in per capita income and productive capacity in the long term. Students examine the problem of fluctuations in the main macroeconomic variables around their long-term levels and the dynamics of inflation, interest rates, unemployment, and the economic policy instruments that can be used to stabilize the economy.
