6.00

UCEAP Semester Units

4.00

Course Description

This course introduces the five core “pillars” of public health practice: biostatistics, epidemiology, environmental health, health policy and management, and social and behavioral sciences. While many public health professionals specialize in one of these areas, a well-rounded understanding across these pillars is essential to public health practice. Lectures and seminars cover key concepts and real-world examples with seminars focusing on the critical evaluation of real studies within each core area. The second part of the course focuses on applying these skills to case studies covering key public health issues from around the world.
