Course Description

This course focuses on contemporary global health issues, with emphasis placed on contextualizing global, national, and subnational health disparities. Students study how health, the environment, and sustainable development are interrelated and work to improve our understanding of both policy and practice. Therefore, students are introduced to important actors and their stated goals. Students examine cases from low- and middle-income countries, as well as from high-income countries. The course takes an interdisciplinary approach, using various perspectives including sociology, bioethics, epidemiology, anthropology, clinical medicine, and political science.
