Course Description

Developmental psychology describes and explains the changes that occur at different stages of life across various domains (social, cognitive, emotional, etc.). Beyond the average trends of human development that can be identified, this course introduces the issue of developmental diversity and variations in individual functioning in interaction with their living environments. The different levels of variability in the study of development are introduced and illustrated throughout the course with concrete examples of typical and atypical developmental trajectories in children and adolescents.

Language(s) of Instruction

French

Host Institution Course Number
