UCEAP Semester Units

3.00

Course Description

In this seminar, students learn about the role of cities in positively and negatively influencing global climate and biological systems, and the approaches taken by European cities to mitigate the negative impact while creating healthier, happier, and more productive urban environments. Topics span holistic dimensions of sustainable discourse, emphasizing the relationship and balance of environmental, social, cultural, and economic factors. The course focuses specifically on the northern European context, especially the host city, Berlin, where students regularly visit projects and meet with local practitioners.
