UCEAP Semester Units

2.00

Course Description

This course introduces modern financial economics. After reviewing essential mathematics and learning Python basics, it studies foundational topics such as portfolio choice, mean-variance analysis, and asset pricing. It also examines how intertemporal decisions shape asset prices and explore classic puzzles, including the equity premium puzzle and excess volatility puzzle.

Course Prerequisites: Familiarity with basic Microeconomics, Macroeconomics, and Econometrics. No prior knowledge of Python is required.

Language(s) of Instruction

English
