Course Description

The course aims to transcend traditional experiential descriptions and value debates, focusing instead on revealing the scientific principles and inherent logic underlying modern state governance. Adopting an objective perspective, the course delineates state governance as a core process comprising "agenda setting - public decision-making - resource allocation - policy implementation," which is further deconstructed into four logically interconnected instructional modules. This systematic approach facilitates a comprehensive analysis of the general principles of state governance. The course endeavors to establish a clear analytical framework to help learners understand how efficient and orderly governance systems are designed and operated, with the dual objectives of cultivating scientific political literacy and guiding students interested in this field through the knowledge framework and research frontiers of public administration and political science.
