Course Description

This course examines the integration and application of IT technology within society, business, government, and community systems, highlighting trends like increased mobility, complexity, globalization, and networking in a data-centric world. It explores how IT technology enhances service delivery and competitiveness in a global, networked economy. It covers the role of information systems in business management and network formation, using real-world case studies to grasp how IS contributes to competitive advantage, as well as IS development, implementation, and maintenance, and ethical, privacy, and security considerations.
